Hi All,

Thru my discussions at CSIRO, I have uncovered some historical, yet potentially relevant material. Attached is the Royal Commission report on Release of Genetically Engineered Organisms into the Environment from 1991 and a field trial for genetically modified virus for conservation purposes. Lastly, there is a publication (that I cannot pull down) and a report on the *Risk assessment for release of genetically modified organisms: a virus to reduce the fertility of introduced wild mice, Mus domesticus*. Let me know if someone can get the PDF.

Unrelated - One of the reasons for me spending time in the SW Pacific is to better understand Australia and New Zealand in regards to the partnership and our effectiveness. Inevitably, a bit of culture is absorbed. In my hasty search for the above papers, I was stopped in my tracks by the image above the Google search bar. Please check it out if you get a chance. In my time off, I will be visiting Alice Springs, Hermannsburg, and potentially the New Haven Sanctuary 5 hrs west of Alice.

Urreke aretyenhenge,
Royden
