Tony,

We have been going through the materials you sent and are puzzled by the description of the cage set ups and the experimental design.

Could you talk with us about it sometime next week after Tuesday?

Thanks

Fred

Hi Fred,

We probably have enough time to squeeze in one more cage trial with the gene-drive construct before we run out of Keck funds. When you get a chance, we should talk about how to set up an experiment that would answer questions about how quickly this element could introgress at different single-release ratios, and the impact of the fact that NHEJ alleles at the khw locus carry a significant load.

Best,

Tony
